Education

Chiang Mai University

Bachelor of Science in Computer Science — GPAX: 4.00/4.00

Chiang Mai, Thailand

Expected 2028

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Operating Systems, Computer Networks, Programming Fundamentals

Technical Skills

Languages: Python, Go, Java, C++, JavaScript

Frameworks & Technologies: FastAPI, Fiber, React.js, Vue.js, Streamlit, Node.js

Databases: PostgreSQL, MongoDB

Tools & Platforms: Git, Docker, Microsoft Azure, Vercel, Supabase

Web: HTML, CSS

English: CMU-eTEGS 85/100

Projects

Noona Appointment Web App | GitHub | Live Demo

2026

Team Lead & Full-Stack Developer, 4-person team | Vue 3, FastAPI, PostgreSQL, SQLAlchemy, Docker, Vercel

- **Led a 4-person team in designing and developing an event and session registration platform**, enabling hosts to create multi-session events while participants register for sessions, join waitlists, manage schedules, and receive email reminders.
- **Led the system and database design** around a Vue 3 frontend, layered FastAPI backend, and PostgreSQL relational model for users, events, sessions, and registrations, while coordinating implementation responsibilities across the team.
- **Engineered concurrent seat-registration and waitlist workflows** using transactions and row-level locking to prevent overbooking under simultaneous requests, enforce capacity and per-user registration limits, and automatically transition users between CONFIRMED, WAITLIST, and AVAILABLE states as seats change.

LLM Financial Advisor | GitHub

2025

Developer, 4-person team | Python, Streamlit, LiteLLM

- **Developed an LLM-powered financial advisor in a 4-person team**, allowing users to ask financial questions in natural language and receive responses backed by specialized tools for financial health, banking, loans, investments, and Thai personal income tax.
- **Designed the LLM function-calling architecture** with LiteLLM and a schema-driven ToolExecutor, separating model interaction from financial logic so the LLM can select a tool, extract structured arguments, execute the corresponding Python function, and incorporate its result into the response.
- **Implemented and integrated a Thai personal-income Tax Calculator** covering progressive and flat-tax calculations and deduction limits, and validated the end-to-end tool-calling workflow with **13 Thai and English financial scenarios**.

Typing VS Demon | GitHub

2025

Team Lead & Developer, 5-person team | Java, Object-Oriented Programming

- **Led a 5-person team in developing a 2D typing action game**, where players move across 5 lanes, type displayed words to defeat approaching enemies, survive increasingly difficult waves, and use power-ups during gameplay.
- **Implemented the core object-oriented architecture and gameplay systems**, including reusable entity and word-object hierarchies, the Wave subsystem for spawning and progression, typed-word matching, enemy/item behavior, collision handling, scoring, and difficulty scaling; also planned the redesigned GameState architecture implemented collaboratively by the team.
- **Iteratively debugged and balanced the game for showcase use**, delivering a completed desktop application with **3 enemy types and 3 power-up types** that was played by **60+ elementary and high-school students** at Chiang Mai University Science Week.

Awards & Activities

ICPC Thailand National Contest

2025–2026

- **First Runner-Up, 2026** — placed **2nd of 61 teams**.
- **Second Runner-Up, 2025** — placed **3rd of 74 teams**.

Mathematics & Programming, Computer Science, Chiang Mai University

Dec 2025 – Feb 2026

Competitive Programming Tutor

- **Tutored 5–20 university students in weekly competitive programming sessions**, covering mathematics, binary search, prefix sums, recursion, and dynamic programming while facilitating collaborative problem-solving and knowledge exchange.
